

MA 341 Applied Differential Equations I

Lecture details

Section 601 Course lectures are available to watch at <http://wolfware.ncsu.edu>
Instructor: Leslie Kurtz
Office: SAS 3240
Email: lakurtz@ncsu.edu
Phone: 919.513.2111
Zoom Office Hours: MWF 11:40am-12:40pm or by appointment
Moodle page: <https://wolfware.ncsu.edu>

Course text

Fundamentals of Differential Equations and Boundary Value Problems, by Nagle, Saff, and Snider, 7th Edition, Addison-Wesley.

Catalog Description

Prerequisite: MA 242 or (MA 132 and MA 231)

Differential equations and systems of differential equations. Methods for solving ordinary differential equations including Laplace transforms, phase plane analysis, and numerical methods. Matrix techniques for systems of linear ordinary differential equations. Credit is not allowed for both MA 301 and MA 341.

Learning Objectives

Upon successful completion of this course, students will be able to:

- Determine if a given function is a solution to a particular differential equation; apply the theorems for existence and uniqueness of solutions to differential equations appropriately;
- Distinguish between
 - (a) linear and non-linear differential equations;
 - (b) ordinary and partial differential equations;
 - (c) homogeneous and non-homogeneous differential equations;
- Solve ordinary differential equations and systems of differential equations using:
 - (a) Direct integration
 - (b) Separation of variables
 - (c) Methods of undetermined coefficients and variation of parameters
 - (d) Laplace transform methods
- Determine particular solutions to differential equations with given initial conditions.
- Analyze real-world problems such as motion of a falling body, compartmental analysis, free and forced vibrations, etc.; use analytic technique to develop a mathematical model, solve the mathematical model and interpret the mathematical results back into the context of the original problem.
- Apply matrix techniques to solve systems of linear ordinary differential equations with constant coefficients.
- Find the general solution for a first order, linear, constant coefficient, homogeneous system of differential equations; sketch and interpret phase plane diagrams for systems of differential equations.

Grading Policy

The grading will be assigned on a 10-point scale: **A: 90 – 100, B: 80 – 89, C: 70 – 79, D: 60 – 69, F: ≤ 60**

The cutoffs for the +/- grades are determined at the end of the semester. Your final grade in this course will be determined by marks earned on the final exam, three term tests, online homework assignments, and in-class quizzes. The weighting of these components are as follows:

Homework = 15 %
Three term tests = 50 %
Final Exam = 35 %

Term Tests 50%

There will be three closed book, closed notes tests that are administered by a testing proctor (information below). Calculators of any kind are not permitted on tests or the final exam. You may choose either of the dates listed below

to take the test. If you are ill on both of the test days, you will need to present a doctor's note to reschedule. If you are out of town on a test day, set up a time with a proctor in your intended location so that you can still take the test.

Test 1: September 4

Test 2: October 9

Test 3: November 6

If you take all of the tests, your lowest test grade will be replaced with your final exam grade.

Final Exam 35%

The final exam is mandatory and cumulative. You can take it either November 16. The only way to take the final exam at another time is to request a change through the Department of Registration and Records, 1000 Harris Hall.

Homework Assignments will be completed on-line using an Internet-based homework service called WeBWorK. The link to the login page is:

https : //webwork.wolffware.ncsu.edu/webwork2

For your username enter the NCSU unity id and your NCSU email password. If you are unable to get into WeBWorK for any reason, email me. You can find more information about submitting your assignments in WeBWorK on the course webpage.

Corrections to the grading

The responsibility for grading tests resides with the Teaching Assistant for this section. After the tests are returned, you have 3 days to look them over and compare them to the solutions online. If you believe an error has been made in grading on a test, you need to notify me within those 3 days. Grade changes will not occur outside of this timeframe. Do not alter the original work!

Students with disabilities

Reasonable accommodations will be made for students with verifiable disabilities. In order to take advantage of available accommodations, students must register with Disability Services: <http://www.ncsu.edu/dso/>
Please let me know how I can better accommodate you.

Academic Integrity Statement and Academic Dishonesty

I assume that anything turned in with your name on it is your own work. Each time you submit a test, homework, quiz, or WebWork assignment, you affirm the honor pledge, "I have neither received unauthorized aid nor given aid on this assignment." The minimum penalty for cheating is a grade of zero on the assignment; violators will be reported to the Academic Integrity Board, which can impose additional sanctions. The code of student conduct can be found at: <https://policies.ncsu.edu/policy/pol-11-35-01>

Non-Discrimination Policy

NC State prohibits discrimination, harassment, and retaliation that are based upon a person's race, color, religion, sex, national origin, age, disability, gender identity, sexual orientation, or veteran status. If you feel that you have been the subject of prohibited discrimination, harassment, or retaliation, you should contact the Office for Institutional Equity and Diversity (OIED) at 919-515-3148.

NC State's policies and regulations covering discrimination, harassment, and retaliation may be accessed at <http://policies.ncsu.edu/policy/pol-04-25-05> or <http://oied.ncsu.edu/divweb>.

MA341 Pacing Guide

Week	Sections	Topics
Aug. 10–14	1.1–1.2 1.3 2.2	Solutions & Initial Value Problems (Video 1) Direction Fields and Phase Line Supplement (Video 2) Separable Equations (Video 2)
Aug. 17–21	2.3 3.2,3.3	Linear First Order Equations (Video 3) Applications (Video 4)
Aug. 24–28	2.4 4.1–4.2 4.2 4.3	Exact Equations (Video 5) Introduction, Second Order Linear Equations (Video 5) Homogeneous Linear Eqs. Constant Coefficients: Real Roots (Video 6) Homogeneous Linear Eqs. Constant Coefficients: Complex Roots (Video 6)
Aug. 31–Sep. 4	4.4 4.5	Undetermined Coefficients (Video 7) Superposition Principle (Video 8) Test 1: September 4
Sep. 7–11	4.6 4.9 4.10	Variation of Parameters (Video 9) Free Mechanical Vibrations (Video 10) Forced Mechanical Vibrations (Video 10)
Sep. 14–18	7.2-7.3	Laplace transform: definition and properties (Videos 10 and 11)
Sep. 21–25	7.4	Inverse Laplace Transform (Video 12)
Sep. 28–Oct. 2	7.5 7.6	Solving IVPs with Laplace transforms (Video 13) Transforms of Discontinuous Functions (Video 14)
Oct.5–9	9.1-9.3	Systems of Differential Equations and Linear Algebra (Video 15) Test 2: October 9
Oct. 12–16	9.4 9.5	Linear Systems in Normal Form (Video 16) Linear Systems of Diff. Eq. with Constant Coefficients: Real Eigenvalues (Video 17)
Oct. 19–23	9.6 9.7	Linear Systems of Diff. Eq. with Constant Coefficients: Complex Eigenvalues (Video 18) Nonhomogeneous Linear Systems (Video 19)
Oct. 26–30	9.7 5.6	Applications: Interconnected Tanks (Video 19) Coupled Mass-Spring Systems (Video 20)
Nov. 2–6	5.4 12.2	Phase Plane (Video 21) Linear Systems in the plane (Video 21) Test 3: November 6
Nov. 9–13	12.3	Almost Linear Systems (Video 22) Review (Video 23)
November 16		Final Exam

Good Luck!
